MADI ALENOV

FULL-STACK DEVELOPER / PYTHON BACKEND

Astana, Kazakhstan • Email: alenovm1@gmail.com
Telegram: @hsokidam • Website: www.madikosh.me • GitHub: github.com/alastrm

PROFILE

Full-stack developer focused on Python backend and TypeScript, with hands-on experience building secure APIs, transactional workflows, and end-to-end web applications. Comfortable taking ownership across application logic, databases, frontend, and deployment.

TECHNICAL SKILLS

Backend: Python, FastAPI, Django, SQLAlchemy, PostgreSQL, Redis, Celery, REST APIs
Frontend: TypeScript, React, Next.js, Flutter, Tailwind CSS
Infrastructure & Security: Docker, Linux, Git, CI/CD, Traefik, Nginx, MinIO/S3, Ed25519, HMAC

WORK EXPERIENCE

Frontend Developer — iQadam Systems

September 2025 - August 2026

- Developed responsive UI components and maintained frontend modules in an existing production application.
- Integrated client-side workflows with REST API endpoints, coordinating request structures and data contracts with backend developers.
- Investigated and fixed frontend defects and usability issues, improving the consistency of existing user flows.

SELECTED PROJECTS

Sealed — Encrypted Reporting Platform | Python, Next.js, Ed25519, HMAC

- Designed client-side encrypted reporting with signed messages, pinned investigator identities, and explicit verification states for legacy records.
- Secured investigator access using one-time HMAC proofs, expiring HttpOnly sessions, and Origin/CSRF protection.
- Built idempotent case submissions, staged encrypted attachments, transactional claims, and automated protocol tests.

Sendrift — Secure File Sharing | FastAPI, Next.js, PostgreSQL, MinIO/S3, Docker

- Implemented private file uploads with staging, strict payload limits, idempotent retries, and transactional finalization.
- Handled concurrency and lifecycle failure cases through database locks, revocation rechecks, expiry workers, and orphan cleanup.

Forge — Container Deployment CLI | Python, Docker, Traefik, Linux

- Built a zero-dependency Python CLI to automate container builds, networking, and lifecycle management.
- Implemented Blue-Green deployments with Traefik routing, in-container health checks, and graceful SIGTERM shutdown.

Mentora — AI Educational Platform | FastAPI, PostgreSQL, Redis, Flutter

- Built asynchronous content-generation pipelines, PostgreSQL row-locking for quotas, and in-memory Anki/PPTX exports.

AWARDS WorldSkills Competition — 2nd Place (city stage) • **LANGUAGES** English B2 · Russian / Kazakh native
